

Slide 1: Opening (45 Detik)

Russell: "Hi everyone! Good morning. I'm Russell, and this is Malya. We are so happy to meet all of you today. We aren't here for a formal lecture; we just want to share our story as fellow students at Satu University. We hope we can learn from each other today."

Malya: "Exactly! Our life on campus is very dynamic, and today we'll talk about our 'Student Ecosystem'—how we organize our clubs, how we lead, and honestly, how we manage everything together!"

Slide 2: HIMA vs. UKM (1 Menit)

Malya: "To understand us, you need to know our two main pillars: **HIMA** and **UKM**. HIMA is our Departmental Student Association. It is academic-based and mandatory for every student within their specific major. It focuses on building our professional identity."

Russell: "On the other side, we have **UKM**, or Student Activity Units. These are all about student passions and hobbies. Membership is voluntary and open to students from all different majors. It's the perfect place to collaborate and make friends outside of your own classroom."

Slide 3: Leadership Journey (2 Menit - DIPERPANJANG)

Malya: "So, how do you become a leader here? It is a real journey from being a member to becoming a chairperson. In the first year, you start as an active member or a committee staff. This is where you learn the organizational culture and how to manage small projects."

Russell: "When you're ready to lead, you enter the Candidacy phase. This is like a mini-political campaign! Candidates must present their vision, mission, and work programs in front of the students. We even do debates! After that, we have an online campus-wide election where every student gets to vote."

Malya: "Once the new leaders are chosen, they don't work alone. We have leadership workshops for the whole executive board (DPI) to build a strong bond and synchronize our goals with the university's vision. This ensures that our plans for the year really help the students grow."

Slide 4: Our HIMA List (1 Menit)

Malya: "We have HIMAs in every major across all our cities: Bandung, Pontianak, and Palembang. For example, in Bandung, we have **HIMPSIKO** for Psychology, **HIMASIF** for Information Systems, and **HIMITSU** for IT students."

Russell: "In Pontianak and Palembang, we have groups like **HIMAKSI** for Accounting and **HIMATIKA** for Informatics. Every student has their own 'home' association where they can build professional skills related to their major."

Slide 5: HIMA in Action (2 Menit - DIPERPANJANG)

Malya: "Now, let's look at what our HIMAs actually do. Our biggest event is '**Creathology**'. It is a huge exhibition where IT, Information Systems, and Design students collaborate. We show off the projects we made in college, like VR games and apps. We even invite high schoolers to visit and try our tech projects!"

Russell: "Next, we have our **Community Service** program at Baros Village. Our Information Systems students (HIMASIF) didn't just visit; they built a digital information board and a web app to help the village staff manage their data more easily. We also held mentoring sessions for the local high schoolers to help them plan for college."

Malya: "Lastly, our Psychology friends run '**Psy-Care**'. They go to elementary schools, like SDK Kalam Kudus Bandung, to teach children about safety and early sex education. They use simple games and pictures so the kids can understand these important topics in a safe and fun way."

Slide 6 & 7: Our UKM List & Types (1 Menit)

Malya: "For hobbies, our UKMs are very diverse. We have **Spiritual UKMs** for different religions, like Majelis Tarbiyah or KMK, where students build their faith together."

Russell: "We also have **Talent & Skills UKMs**. This includes **Onelish** for English, **One By Code** for coding, and even **E-sports**. We even have new clubs like **Matasu** for theater and **Littera** for reading. These clubs are where we build our 'campus family'."

Slide 8: UKM in Action (2 Menit - DIPERPANJANG)

Malya: "Our UKMs are very active in doing real-world projects. Take **One By Code**, our coding club. They built the **Empact Website**, which is a professional company profile and registration system. It's a great way to use our coding skills to help real communities."

Russell: "Then we have **Onelish**, our English Club. They organized a workshop on **English Interview Strategies**. They even invited our Vice Rector to share tips on how to pass job interviews in English. This is very useful for us because we want to be ready for the professional world."

Malya: "Finally, there's **OneTalk**, our Public Speaking club. They have weekly sharing sessions where students can practice speaking in front of an audience. It's a very safe place to make mistakes and learn how to be more confident speakers together."

Slide 9: Campus Support (45 Detik)

Russell: "We aren't doing this alone. Our campus is like our teammate. They provide funding for our food and logistics for some events. They also give us great facilities like meeting rooms and tech equipment."

Malya: "Our lecturers also actively help us. They often become speakers in our events or help us organize our programs. The campus even provides board games for the English Club to keep our meetings interactive! This support makes our student life much easier."

Slide 10: Challenges (2 Menit - DIPERPANJANG)

Russell: "But let's be real—it's not always easy. We face three main 'headaches.' First is the **Academic-Organization Balance**. Sometimes we have to lead a committee while also acting as a consultant for a real company for a class project. It's a huge challenge to manage our time without getting burned out."

Malya: "Second is the '**Hype Curve**'. In the beginning, everyone is super excited to join a club. But when midterms or final deadlines start to pile up, our club meetings suddenly become very quiet! We are always thinking about how to keep our members excited all semester long."

Malya: "Third is **Social Media Burnout**. In today's digital world, there is so much pressure to keep every organization's Instagram feed looking aesthetic, trendy, and active 24/7. It's exhausting to always be 'on' and making content while also studying."

Wrap-Up & Handoff

(Waktu bicara ideal: 1 Menit. Tutup dengan manis dan oper bola ke delegasi UP).

Russell: "So, yeah... that is the reality of our student organization ecosystem at Satu University. It's incredibly rewarding, but it definitely comes with its own modern challenges. We are still learning, still adapting, and continuously trying to improve."

And honestly, that is exactly why we are so excited to be in this room with all of you today. We really want to hear your side of the story. So, I will wrap up my presentation here, and I

will gladly pass the floor over to the representatives from the University of the Philippines. We can't wait to see how you guys run things at UP, and maybe we can tackle some of these shared challenges together in the Q&A session right after!

Before that, we want to gather a few questions from all of you about Organization and Leadership at Satu University. We'll prepare a Mentimeter where you can submit your questions, and we'll answer them at the end of the whole presentation from both institutions. We'll give you two minutes to submit your questions.

Thank you so much, everyone. The floor is yours, UP!"
