

Project Brief - SATU University

— Knowledge Management —

BINUSIAN 2028

Introduction

- Hasil proyek harus diselesaikan dalam periode mata kuliah selama semester Ganjil 2025/2026. Dan di presentasikan di Akhir semester
- Evaluasi berdasarkan hasil kelompok dan kontribusi masing-masing anggota.
- Pastikan ada laporan terpisah untuk masing-masing matakuliah.
- Pastikan konsistensi, keterhubungan, dan memastikan integrasi proses dalam mata kuliah terkait dalam hasil proyek.

Project Case Study / Company

- Sesuai Perusahaan yang digunakan di Subject Advanced IS Analysis and Design.

Project Objectives

By the end of this project, students should be able to:

1. Understand and apply the principles of Knowledge Management in a real organizational context.
 2. Identify, analyze, and map existing and required knowledge within an organization.
 3. Propose strategies to enhance organizational knowledge sharing, retention, and utilization.
 4. Design a practical **Knowledge Management intervention** (program, culture initiative, or digital application/system) that supports the company's objectives.
 5. Integrate **theoretical KM concepts** with **Information Systems solutions**.
-

Project Scope & Deliverables

Each group will work with a **selected company** (study case) and deliver the following outputs:

1. Knowledge Audit & Mapping

- Identify and classify **existing knowledge assets** (explicit & tacit knowledge).
- Map knowledge flows (how knowledge is created, shared, and stored).
- Analyze knowledge gaps (what knowledge is missing or underutilized).

2. Knowledge Needs Analysis

- Interview or survey company staff to capture **critical knowledge requirements**.

- Analyze areas where knowledge is siloed, lost, or inefficiently managed.
- Define key **knowledge domains** important for the company's sustainability and innovation.

3. KM Strategy Proposal

- Suggest strategies for improving **knowledge culture** (e.g., communities of practice, mentoring, knowledge sharing incentives).
- Recommend **organizational programs** that enhance knowledge transfer and retention.
- Define measurable outcomes (e.g., improved decision-making, reduced duplication, better onboarding).

4. KM System / Application Prototype

- Design a digital solution that supports KM (e.g., knowledge repository, intranet portal, AI chatbot for knowledge search, collaboration platform).
- Develop **low-fidelity to medium-fidelity prototype** (wireframes, mock-ups, or working demo depending on capability).
- Show how the application integrates with the company's workflows and supports KM activities.

5. Final Report & Presentation

- Document the process, findings, and solution in a structured report.
- Include **theoretical grounding** (KM models, frameworks such as SECI Model, Knowledge Spiral, or Knowledge Cycle).
- Present the solution (strategy + application demo) in a **final showcase**.

✂ Suggested Tools & Methods

- Knowledge Mapping (e.g., process flow diagrams, mind maps, knowledge network maps).
- Surveys, interviews, and observations for knowledge needs assessment.
- KM Frameworks: SECI Model (Nonaka & Takeuchi), Knowledge Life Cycle, Wiig KM Model, etc.
- Tools: Notion, SharePoint, Confluence, Miro, Figma, or any app development platform.

Suggested Timeline

- **Week 1** : Company selection, project plan approval.
- **Week 2–4** : Knowledge Audit & Mapping.
- **Week 5–6** : Knowledge Needs Analysis.
- **Week 7–8** : KM Strategy Proposal.
- **Week 9–11** : KM System Prototype development.

- **Week 12–13** : Final report preparation & presentation.
-

Evaluation Criteria

- **Knowledge Audit & Mapping → 20%**
- **Knowledge Needs Analysis → 15%**
- **KM Strategy Proposal → 20%**
- **KM System/Application Prototype → 30%**
- **Final Report & Presentation → 15%**
